Laboratory Procedures

Teicoplanin A2-4 is supplied as a solid. A stock solution may be made by dissolving the teicoplanin A2-4 in the solvent of choice. Teicoplanin A2-4 is soluble in organic solvents such as ethanol, methanol, DMSO, and dimethyl formamide, which should be purged with an inert gas.

Teicoplanin A2-4 is sparingly soluble in aqueous solutions. To enhance aqueous solubility, dilute the organic solvent solution into aqueous buffers or isotonic saline. If performing biological experiments, ensure the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. We do not recommend storing the aqueous solution for more than one day.

Description

Teicoplanin A2-4 is a component of the teicoplanin complex (Item No. 15511), a glycopeptide antibiotic produced by A. teichomyceticus that is broadly effective against Gram-positive bacteria in vitro.1
