## Description

Stanozolol (Item No. 21167) is an analytical reference standard that is categorized as a synthetic anabolic androgenic steroid. Stanozolol has low urinary excretion; therefore, its metabolites are usually used for detection. Formulations containing stanozolol are used as a treatment for hereditary angioedema. It has also been abused in athletics to improve performance. Stanozolol is regulated as a Schedule III compound in the United States. This product is intended for research and forensic applications.
