Laboratory Procedures

Folipastatin is supplied as a solid. A stock solution may be made by dissolving the folipastatin in the solvent of choice, which should be purged with an inert gas. Folipastatin is soluble in organic solvents such as ethanol, methanol, DMSO, and dimethyl formamide.

Description

Folipastatin is a fungal metabolite produced by A. unguis and an inhibitor of phospholipase A₂ (PLA₂; IC₅₀ = 39 μ M).¹ It inhibits release of arachidonic acid (Item Nos. 90010 | 10006607) from rat polymorphonuclear leukocytes (IC₅₀ = 24 μ M). Folipistatin also inhibits radioligand binding to L-type calcium channels in porcine heart membranes (IC_{50} = 0.39 μ M) but has no effect on contraction of taenia $(IC_{50} = > 100 \mu M).$
