Product Information

Tibolone
Catalog No. 10006321

CAS Registry No.: 5630-53-5
Formal Name: 17α-hydroxy-7α-methyl-19-norpregn-5(10)-en-20-yn-3-one
Synonyms: Livial, Liviella
MF: C_{21}H_{28}O_{2}
FW: 312.5
Purity: ≥98%
Stability: ≥2 years at -20°C
Supplied as: A crystalline solid

Laboratory Procedures
For long term storage, we suggest that tibolone be stored as supplied at -20°C. It will be stable for at least two years. Tibolone is supplied as a crystalline solid. A stock solution may be made by dissolving the tibolone in an organic solvent purged with an inert gas. Tibolone is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF). The solubility of tibolone in these solvents is 2, 20, and 30 mg/ml, respectively.

Tibolone is sparingly soluble in aqueous buffers. For maximum solubility in aqueous buffers, tibolone should first be dissolved in DMF and then diluted with the aqueous buffer of choice. Tibolone has a solubility of 0.25 mg/ml in a 1:3 solution of DMF-PBS (pH 7.2) using this method. We do not recommend storing the aqueous solution for more than one day.

Tibolone is an estrogen-like compound used for the treatment of the symptoms associated with menopausal transition (i.e., climacteric symptoms) and also for the treatment of osteoporosis. Three major metabolites of tibolone are responsible for its tissue selective mechanism of action. Conversion into 3α- and 3β-hydroxy-tibolone results in estrogenic effects in brain, vagina, and bone. The Δ4 isomer has progestrogenic and androgenic effects and does not cause estrogen stimulation in the endometrium. A two-year longitudinal study indicates that low doses (1.25-2.5 mg) of tibolone effectively relieve climacteric symptoms and prevent loss of bone mass in early postmenopausal women.
