Product Information

Trolox
Item No. 10011659

CAS Registry No.: 53188-07-1
Formal Name: 3,4-dihydro-6-hydroxy-2,5,7,8-tetramethyl-2H-1-benzo pyran-2-carboxylic acid
Synonym: 6-hydroxy-2,5,7,8-tetramethylchroman-2-carboxylic Acid
MF: C_{14}H_{18}O_{4}
FW: 250.3
Purity: ≥98%
Stability: ≥2 years at -20°C
Supplied as: A crystalline solid
UV/Vis: λ_{max} 291 nm

Laboratory Procedures
For long term storage, we suggest that trolox be stored as supplied at -20°C. It should be stable for at least two years.

Trolox is supplied as a crystalline solid. A stock solution may be made by dissolving the trolox in an organic solvent purged with an inert gas. Trolox is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide. The solubility of trolox in these solvents is approximately 20 mg/ml.

Further dilutions of the stock solution into aqueous buffers or isotonic saline should be made prior to performing biological experiments. Ensure that the residual amount of organic solvent is insignificant, since organic solvents may have physiological effects at low concentrations. Organic solvent-free aqueous solutions of trolox can be prepared by directly dissolving the crystalline compound in aqueous buffers. The solubility of trolox in PBS, pH 7.2, is approximately 3 mg/ml. We do not recommend storing the aqueous solution for more than one day.

Trolox is a cell-permeable, water-soluble derivative of vitamin E with potent antioxidant properties. It is commonly used as a standard or positive control in antioxidant assays. In addition, trolox is used to assess the role of oxidative injury in processes like neuronal cell death and aging. Trolox is effective as adjunctive therapy in the treatment of certain cancers.
