PRODUCT INFORMATION

SIRT4 (human recombinant)
Item No. 10317

Overview and Properties

Synonyms: NAD-dependent ADP-ribosyltransferase Siruin 4, Silent Information Regulator 4, SIR2L4, SIR2-like Protein 4, Siruin 4
Source: Recombinant N-terminal GST-tagged enzyme expressed in E. coli
Amino Acids: 1-314 (full-length)
Uniprot No.: Q9Y6E7

Batch specific information can be found on the Certificate of Analysis or by contacting Technical Support

Molecular Weight: 61.9 kDa
Storage: -80°C (as supplied)
Stability: ≥9 months
Purity: batch specific (≥95% estimated by SDS-PAGE)
Supplied in: batch specific
Protein Concentration: batch specific

Additional Information: This protein has not been tested for enzyme activity.

Image

Representative gel image shown; actual purity may vary between each batch but protein will be ≥95% pure.

WARNING

This product is for research only - not for human or veterinary diagnostic or therapeutic use.

SAFETY DATA

This material should be considered hazardous until further information becomes available. Do not ingest, inhale, get in eyes, on skin, or on clothing. Wash thoroughly after handling. Before use, the user must review the complete Safety Data Sheet, which has been sent via email to your institution.

WARRANTY AND LIMITATION OF REMEDY

Buyer agrees to purchase the material subject to Cayman’s Terms and Conditions. Complete Terms and Conditions including Warranty and Limitation of Liability information can be found on our website.
There are seven human sirtuins, also known as class III HDACs, which have been designated SIRT1-SIRT7. Each is involved in various post-translational modifications by utilizing NAD dependent deacetylase and ADP-ribosyltransferase activities. SIRT4 is a mitochondrial ADP-ribosyltransferase responsible for the transfer of ADP-ribose from NAD to specific substrates such as glutamate dehydrogenase (GDH).\(^1\) In caloric-sufficient conditions, SIRT4 ADP-ribosylates GDH, repressing its activity and correspondingly decreasing insulin secretion.\(^2\) There is some uncertainty about the relevance of sirtuin ribosyl transferase activity due to its very slow rate, which is about 500 times lower than the corresponding deacetylation reaction (for those that have been characterized).\(^3\) SIRT4 is found in many tissues, but is specifically enriched in the kidney, heart, brain, and liver.\(^2\)
