**MitoP-d_{15}
Item No. 19296**

**Formal Name:** [(3-hydroxyphenyl)methyl]triphenyl-d_{5}-phosphonium, monobromide

**Synonym:** MitoPhenol-d_{15}

**MF:** C_{25}H_{7}{D_{15}}OP • Br

**FW:** 464.4

**Chemical Purity:** ≥95% (MitoP)

**Deuterium**

**Incorporation:** ≥99% deuterated forms (d_{1}-d_{15}); ≤1% d_{0}

**UV/Vis.:** \( \lambda_{\text{max}} \): 295 nm

**Supplied as:** A crystalline solid

**Storage:** -20°C

**Stability:** As supplied, 2 years from the QC date provided on the Certificate of Analysis, when stored properly

**Laboratory Procedures**

MitoP-d_{15} contains five deuterium atoms located on each phenyl group. It is intended for use as an internal standard for the quantification of MitoP (Item No. 17117) by GC- or LC-MS. The accuracy of the sample weight in this vial is between 5% over and 2% under the amount shown on the vial. If better precision is required, the deuterated standard should be quantitated against a more precisely weighed unlabeled standard by constructing a standard curve of peak intensity ratios (deuterated versus unlabeled).

MitoP is supplied as a crystalline solid. A stock solution may be made by dissolving the MitoP in the solvent of choice. MitoP is soluble in organic solvents such as ethanol, DMSO, and dimethyl formamide (DMF), which should be purged with an inert gas. The solubility of MitoP in ethanol is approximately 12 mg/ml and approximately 20 mg/ml in DMSO and DMF.

**Description**

MitoP is a phenol product produced by the reaction of H_{2}O_{2} with the ratiometric mass spectrometry probe MitoB (Item No. 17116). MitoB contains a triphenylphosphonium cation component that drives its accumulation in mitochondria where its arylboronic moiety selectively reacts with H_{2}O_{2} to produce MitoP. Quantifying the MitoP/MitoB ratio by LC-MS/MS reflects the mitochondrial matrix H_{2}O_{2} concentration.
